Database

1. Why this matters

Records are the building blocks of Slate. Every person, application, event, or decision is stored as a record in a table.

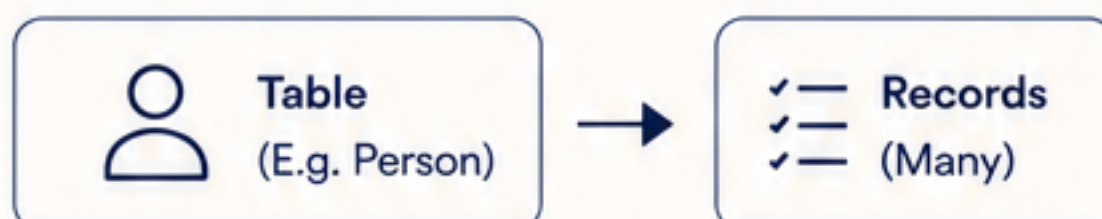

2. Think of it like...

Think of a record as a folder. Each folder holds everything about one person or item.

3. The Big Picture

4. Common Misconceptions

- A record is not the same as a table.
- A record is not the same as a relationship.
- Deleting a record can remove important history.

5. Key Takeaways

- ✓ A record represents one item in a table.
- ✓ It holds all the details for that item.
- ✓ Records are created, updated, and used across Slate.
